

Integrated QEMS policy

Grant Detection, s.r.o. is aware of its co-responsibility for the protection of the environment, and therefore declares its intention to conduct its business in a way that not only fulfills its visions, plans, intentions and expectations in terms of economic aspects, but also wants to conduct its activities in an environmentally friendly manner.

The company is one of the entities operating on the Czech market mainly in the field of production and sale of detectors for people and animals in vehicles, and therefore it is not a significant polluter of the environment.

We consider important environmental aspects of the company's operations to be the consumption of fuel media (fuel oil) from vehicle operations, heating media and electricity. We manufacture the MMD01 detector from finished components and therefore produce minimal waste.

We carry out our activities in a commercial building, the company's activities do not create conflicts with the surrounding residents and other companies, and the environmental impacts caused by the company are below the distinguishing threshold of attention of all interested parties.

Although the company has minimal impact on the environment through its activities and products, it is aware that it could improve its operations and will therefore strive to implement these principles: Better than before, it will enable it to focus on and meet the requirements of the legislation that applies to its environmental aspects and other requirements to which it has committed itself in relation to its customers and the companies in its immediate surroundings.

Repeatedly and consistently seek opportunities to improve its environmental profile in order to fulfil one of its principles - to adopt a philosophy of pollution prevention and demonstrate compliance with the principle of continuous improvement by reducing the negative environmental impacts of its activities and products.

Use energy from renewable and sustainable energy sources, including the use of electromobility. Grant Detection, Ltd. will conduct internal, dedicated communication with its employees to understand and fulfill these objectives, including actively communicating these principles. It will explain its position in a clear manner to enlist the support of all employees in whom it sees the potential to carry these public benefit principles into their families and communities. In this way, she also wants to influence her suppliers and send a signal about her behaviour to her customers. It sees this as a contribution to the ethical behaviour of a certain group of businesses that would like to set an example to follow in their behaviour and management style.
